

Common is a new generation loyalty system based on ~~the money you spend~~
the  you spare

Common is a new generation loyalty system in the form of an app measuring reductions of CO₂ emissions resulting from activities performed by individuals and rewarding them systematically according to the “1 kg of non-emitted CO₂ = 1 greencent” principle. Cycling 6 km to the office for example makes you emit 781.80 g of CO₂ less than if you were driving a car, so you would get 0.7818 GC as a reward as 781.80 g = 0.7818 kg. Our users can then spend their greencents with our partners: we enable thus individuals to pay with their eco-friendliness.

As we are expanding in Germany, Hungary and France, we are looking for a:

Mobile App Development Manager in full or part time (remote)

Key duties:

- Ensure mobile development of the Common app on iOS, Huawei and/or Android
- Work closely with our CTO who developed the Android app and manages the back end
- Collaborate with our graphic designer on UX/UI topics
- Implement changes according to our customer needs
- Participate in our weekly business and technical online meetings

What we bring you:

- A flexible work life balance
- A multicultural work environment
- A real start-up experience
- A dive into the green entrepreneurship scene
- First a salary, then possibly shares of the soon to be founded company

The skills we are looking for:

- You master relevant programming languages: Kotlin, Flutter, Swift etc.
- You are fluent in written and oral English, possibly in French, German or Hungarian
- You have a flexible mind, enabling you to work on different topics and adapt fast to change
- You have gathered experience in mobile app development either as a student, an intern, a freelancer or an employee
- You are looking for a meaningful experience and are an adept of learning by doing

Our iOS and Android apps are already live. We have users and partners accepting the greencent as a means of payment. We are talking with significant potential customers about a large-scale implementation of our concept. We are based in Munich, Stuttgart, Erlangen and Budapest. Do you want to contribute to monetizing CO₂ savings? Then write to Enée Bussac, Common co-founder and Country Manager Germany & France at enee@co2mmon.eu.
